

Lock it down.

*When there are wolves at the doorstep of your hen house,
you need to shut the door and lock it down.*

SWICKtech can protect your infrastructure.

SWICKtech’s security suite is designed to protect your company’s infrastructure from all major cyber threats and provide back-up and recovery, should it ever fail for any reason. Malicious direct or indirect threats from the outside, as well as internal desktop compromises, are thwarted by our security tools. Internal access to your systems is also protected using various levels of controlled permissions so that only select people have access to secured parts of your system.

- **SWICKtech’s ESP** suite of software monitors, predicts and prevents security violations, including: viruses, spy-ware, spam, firewall invasions, hacking and even deteriorating hardware.
- **SafetyNET** is SWICKtech’s proprietary system — ensuring business continuity under the harshest of circumstances. Secure backup and recovery, both on-site and off-site, allows for immediate data recovery and quick business resumption should your system crash.

Our Guarantee

We’ll get it right the first time!

At SWICKtech, we feel so strongly about the importance of ensuring your network systems are stable, we insist you accept this guarantee of our work.

We promise to perform our services right the first time, or we’ll do them again at NO CHARGE. Should something go awry, we’ll make it right for you, our valued client, on our dime.

That’s our promise, no fingers crossed.
